METAL FRAMING SYSTEM

Continuous Slot Metal Framing System

- Installs quickly
- Completely adjustable
- Re-usable
- Eliminates all welding, drilling and use of special tools

1. Place the spring nut anywhere along the continuous slotted channel.

2. Turn clockwise 90° to line up the grooves in the nut with the inturned edges of the channel.

3. Inset the bolt through the fitting and into the spring nut.

4. Added channels are able to be bolted to the existing fitting by following procedure described in steps 1-3.

5. Using a wrench to tighten the bolt will lock the serrated teeth of the channel nut onto the inturned edges of the channel.

Channel Nuts

Channel nuts are machined from steel bars and are case hardened. Nuts are designed with shaped ends that allow them to be turned clockwise within the channel after insertion through the opening. The channel nut is held in place when the two grooves with the serrated teeth engage the inturns of the channel after the bolt is tightened. This stops any movement of the nut and bolt within the framing member. Channel nuts conform to ASTM Specification A1011 SS GR 33 (material only). Screws conform to SAE J429 GR.
