In this new space for Broad Institute - Binney Street

Flex Panel Furniture System

Lexington Series Wood Veneer Casework

Phenolic Resin Tops

Cantilevered Flex Carts

Broad, a leader in genomics research, needing to accommodate their growing research initiative constructed new laboratory space. The labs were built with flexibility in mind by utilizing a 6" painted metal core with Lexington Series fixed wood casework on each side. Mobile carts with overhead shelves and hanging wood cabinets provide an adaptable system accommodating their expanding needs. Each row of carts were located below overhead service carriers to provide for electrical, lab plumbing services and ultimate flexibility.
