

the right formula for Dexter School - Clay Science Center

OVERVIEW

- **Project:** 5-story education and laboratory facility
- **Architect:** Alan Schoenegge Associates

In this new space for Dexter School - Clay Science Center

Lexington Series Wood Veneer Casework

Phenolic Resin Tops and Pegboards

Pro Series Fume Hoods

Plain sliced maple casework with traditional top frame construction was the basis for this project. Flexibility was essential to the functionality of this teaching space which required large mobile student benches. The benches allow for quick changes to the lab layout. Specialty cabinets were designed along a unique curved wall, and were constructed to accommodate individualized storage space for each student. Other products supplied consisted of an under-the-counter refrigerator, glass washer, phenolic resin work surfaces and pegboards. A Harvard Series fume hood complemented this modern educational showcase.
