

the right formula for East Carolina University School of Dental Medicine- Fourth Floor Fit-up

OVERVIEW

- **Project:** 33,930 sq. ft. Fourth Floor Renovation
- **Architect:** Lord Aeck Sargent
- **GC:** Holt Brothers Construction

In this new lab for East Carolina University School of Dental Medicine- Fourth Floor Fit-up

Painted Steel Casework

Pro Series Fume Hoods

Optima Series Freestanding Benches

Epoxy Resin Tops

East Carolina University's School of Dental Medicine was able to finish up Ross Hall by filling the fourth floor with a dental research lab. This newly created space will help dentists study and provide treatments for patients. Pre-plumbed and pre-wired freestanding bench systems were provided for flexibility as well as blue coiled hoses that doubled as wire management for multiple cords and data cables. Under the benches, painted steel mobile cabinets that feature epoxy resin surfaces provide extra work surfaces when needed. Extra deep constant volume fume hoods were located in alcoves adjacent to the main labs. Sterilizers and glass washers were provided to keep the instruments clean and sterile. Equipment such as a scullery sink, painted steel adjustable wall shelving, cylinder restraints, overhead service panels and label holders were all supplied to help organize the new space.
