Pump Storage Cabinet Details

Pump cabinets are insulated with 1" thick acoustic foam which provides sound absorption and noise reduction over a wide range of frequencies. Foam is attached to the interior of the cabinet including the door by an adhesive backing on the foam. The foam is fire resistant and complies with MVSS 302 AND UL94 HF-1 requirements. Two vent holes are incorporated in the cabinet back for connections to centralized lab exhaust systems. Custom vent cutouts are available. Back access panel is easily removable to provide convenient access to venting or electrical connections after installation. One 120 Volt / 20 Amp (15 Amp in Canada) electrical duplex receptacle provides power to the vacuum pump (final power connection required). The switch that controls receptacles is located on the front panel on False Panel Units; Full height Door Units are typically wired through the fume hood.
