

OVERHEAD

SERVICE DISTRIBUTION

Laboratories that will grow with you must be adaptable, easily modified, and provide maximum service solutions to suit your changing requirements. Our service distribution solutions have been designed to be compatible with a wide range of furniture and fume hood products, allowing you to create a laboratory system that grows and changes with you.

Functional

Locating service fixtures overhead optimizes the work space normally occupied by deck mounted fixtures while keeping utilities all within easy reach in a contained, configurable unit. Units strategically located throughout the lab allow reconfiguration of workstations or equipment. Quick and simple reconfiguration saves on labor costs and virtually eliminates downtime.

Flexible

Ideal for use with carts, tables, and workstations. Instruments and equipment can be easily connected to services as needed and simply moved when your needs change. Overhead distribution facilitates mobility and optimizes layout flexibility.

Cost-Effective

Optional factory pre-wiring and pre-plumbing are available to reduce installation time on-site. Delivery of services overhead can help minimize costly floor penetrations and provide an economical alternative in new construction and renovations.

The Avion™ allows mobile furniture convenient access to all essential services. Lighting options can be used to better illuminate your work surfaces.

Ceiling Service Panels are available in standard sizes of 2' x 2' with customized sizes and configurations available to meet your lab's specific needs.

Ceiling Service Panels are designed to integrate into a ceiling grid and provide a low cost method of delivering plumbing, power, and data.

SERVICE DISTRIBUTION

Suspended Overhead Carriers with adjustable shelving, electrical raceways, data outlets and service fixtures.

Avion™ and other suspended carriers can be equipped with spot ventilation devices to provide point of use exhaust extraction.

Custom designed configurations to accommodate all overhead service requirements.

Chameleon™ service carriers can be suspended or flush mounted from the ceiling and are available in many configurations.

Mobile/moveable products connect to vertical service carriers using quick connects to maximize function and flexibility.
