In this new lab for Sanofi

Painted Steel Overlay Casework

Island Benches

B2 Biosafety Cabinets

SafeGuard Fume Hoods

Metro Shelving

Acrylic Pegboards

Drop-in Epoxy Sinks

Through state-of-the-art lab furniture and reliable installation, New England Lab aided Sanofi in the fit-out of a centralized campus for life sciences research in Cambridge, MA. The global biopharmaceutical firm's objective for this new, 11-floor research and development center was to bring together Sanofi employees from various Boston locations. New England Lab provided the space with custom-designed lab benches, which were prototyped and built at our facility to cater to the specific needs of this research and development lab. The customized prototype includes a light system that allows staff to adjust brightness, switch and dimming controls, and wire management for each project. Overhead service carriers and SafeGuard fume hoods provide flexibility and allow Sanofi to further customize their lab in alignment with their research.
