---

Pro Series Fume Hood

---

Altus™ Freestanding Benches

---

Epoxy Countertops

---

Drop In Epoxy Sinks

---

Epoxy Pegboards

---

Teleflex Research Laboratory in Morrisville, North Carolina, is a premier medical research facility. As the selected laboratory furniture subcontractor, New England Lab provided high-quality fixed painted steel casework and adaptable movable lab benches tailored to the facility's research requirements. Fixed cabinetry establishes permanent work areas, featuring deck-mounted plumbing fixtures and multiple sink stations with pegboards for convenient glassware drying. Movable benches offer flexibility, with built-in utility services that connect to ceiling service panels designed to fit within the ceiling grid system. These movable plug-and-play benches enable the laboratory layout to evolve alongside research needs. A Pro Series chemical fume hood supported by specialty acid and flammable storage cabinets, ensures a safe environment for experimentation. The resulting laboratory promotes collaboration, functionality, and efficiency, delivering a modern space designed for long-term use and adaptability.
