Painted Steel Casework

Solicor Phenolic Resin Tops

Pro Series Fume Hoods

Painted Steel Wall Shelving

Plumbing Fixtures

American Gene Technologies develops genetic medicines to target major diseases such as HIV/AIDS, Phenylketonuria and liver cancer. With a fast approaching move-in deadline, American Gene Technologies worked closely with New England Lab's rapid ship division NEL Direct. This allowed New England Lab to quickly furnish AGT's new headquarters with painted steel casework, phenolic work surfaces, and overhead steel shelving. The chemical resistant phenolic resin tops and pegboards have a color-through core creating a unified look throughout the lab. Bench-mount fume hoods with specialty cabinets and polished chrome plumbing fixtures complete the space.
