In this new lab for Atrium Health - Cannon Pediatrics Translational Research Lab

Plastic Laminate Casework

Painted Steel Casework

Max Resistance2 Phenolic Resin Work Tops

NovaGuard Fume Hood

Atrium Health, a not-for-profit healthcare system focusing on pediatric, cancer, and heart care, was looking to renovate three laboratories in the Cannon Research Center in North Carolina. They chose New England Lab to provide blue and gray plastic laminate cabinets in the facility's pediatrics section. The white color-through core chemical resistant phenolic work surface creates a bright and consistent look. A high-performance fume hood located in the research lab sits on painted steel acid and flammable cabinets. The painted steel service chase was a custom color choice to bring a playful pop of color to the space.
