Flex Series Furniture Systems

---

Lexington Series Maple Casework

---

Cambridge Series Mobile Tables

---

Pro Series Fume Hoods

---

Custom Markerboards and Tackboards

---

The BIDMC space at the 18-story Center for Life Science Building includes our 6-inch painted steel Flex Series system complimented by fixed maple counter supports. Maximum casework flexibility was achieved by converting our Lexington Series maple cabinets into modular units on nylon glides. Cabinets are mounted securely under the gray epoxy work surfaces—and are easily moved when needed. Custom built-in marker and tack-boards provide a finishing touch. Pro Series fume hoods and an array of mobile tables were also provided to meet this client's requirements.
