

# Beam Therapeutics - 26 Lansdowne Street

## OVERVIEW

- **Project:** 1st Floor Pharmaceutical Laboratory Fit-out
- **Architect:** Charles Rose Architects
- **Lab Planner:** LLB Architects
- **GC:** The Richmond Group

## In this new lab for Beam Therapeutics - 26 Lansdowne Street

Designer Steel Overlay Casework

---

Altus Freestanding Bench Systems

---

Pro Series Fume Hoods

---

Epoxy Resin Work Tops

---

Service Fixtures & Safety Stations

---

With new ideas and ground breaking base editing technology, Beam Therapeutics needed a new space to call their headquarters. For the first floor space in Cambridge, MA, New England Lab provided freestanding and movable Altus bench systems with epoxy work surfaces as an economical but fully flexible solution. In the Main Lab, painted steel cabinet bodies were fitted with chemical resistant plastic laminate fronts that mimic wood veneer for a cost-saving but pleasing aesthetic. In the fume hood alcove, painted steel fronts were used to keep a consistent look with the specialty cabinets under the fume hoods. Sink stations throughout the laboratory include epoxy pegboards, mixing faucets, pure water faucets and an overhead steel shelf. Variable volume fume hoods and cylinder restraints finish out the space.
