## In this new lab for University of South Carolina- Horizon I

Wood Veneer Casework

---

Cambridge Series Steel Table System

---

Pro Series Fume Hoods

---

The University of South Carolina was looking to build and expand their research community with the Horizon I building as the first of many on their Innovista research campus. The new laboratory fit-out, approximately 47,000 sq. ft., houses the USC aerospace program and multiple economic and investment programs. New England Lab provided custom-stained maple veneer casework and welded steel table systems for the Horizon I building. Pro Series chemical and radioisotope fume hoods and acid resistant polypropylene fume hoods were also included. Two double-sided floor-mounted fume hoods were custom designed to accommodate the users needs.
